

Digital customs processing

Norwegian Customs is implementing digital customs processing (Digitoll) in order to make border crossings more efficient.

Norwegian Customs has developed **Digitoll** as the digital solution for importing goods into Norway. With Digitoll, information about the transport and goods must be submitted **digitally before or at** the border crossing.

15 September 2026:

Digital submission of notification and disclosure messages become mandatory before or at the border crossing for all goods transport to Norway (cf. Section 2-3 of the Movement of Goods Act and Section 2-3 of the Movement of Goods Regulations).

1 March 2027:

Declarations must be submitted before or at border crossing, and the direct transport arrangement will be discontinued.

Important:

The operator of the means of transport is responsible for compliance with the notification and disclosure obligation, but can choose to use a customs representative.

Transports that **have not submitted** the required information before or at border crossing could experience **longer processing times** and **delays** at the border.

Follow the QR code for more information.
